Bad practice Warnings

Code	Warning
CN	com.github.ontruck.controller.plan.Plan.clone() does not call super.clone()

Details

CN_IDIOM_NO_SUPER_CALL: clone method does not call super.clone()

This non-final class defines a clone() method that does not call super.clone(). If this class ("*A*") is extended by a subclass ("*B*"), and the subclass *B* calls super.clone(), then it is likely that *B*'s clone() method will return an object of type *A*, which violates the standard contract for clone().

If all clone() methods call super.clone(), then they are guaranteed to use Object.clone(), which always returns an object of the correct type.
